# Clout City: Hollywood Music — Design System Guide (v1)

Oct 17, 2026 · @Internovatechnologies

This is the builder spec for Clout City: Hollywood Music's UI. It is a delta on the Clout City Design System Guide (v2): **copy that guide into the repo's docs folder; everything in it applies unless this guide changes it.** This guide covers what changes for Hollywood, the illustrated map, and the new performance-game screens (C46 to C65). Game rules come from Clarifications & Updates; where they disagree on behavior, Clarifications wins.

Sizes are in iPhone points at a 390 pt portrait viewport, as in Clout City.

## 1. Design principles

Clout City's seven principles carry over (glass over the world, pills as the atom, two weights of text, one loud button, real money always marked, delight through emoji and wit, characters as the hero). Two are added for the performance game.

8. **The highway is sacred.** During a show nothing covers the lanes: no toasts, no prompts, no banners, no HUD. Every pixel either helps the player hit the next note or shows how the crowd feels.
9. **Read in a glance, feel in the thumbs.** Notes are big, high-contrast and distinct by shape as well as color; every hit gets instant visual and audio feedback within one frame of the tap.

## 2. Brand layer: from NYC night to Hollywood after dark

The system keeps Clout City's structure and most tokens and swaps the city's mood: taxi cabs and wet streets become marquee bulbs, spotlights, sunset haze and stage neon.

| Clout City: NYC | Clout City: Hollywood Music |
|---|---|
| Key art: rainy night street, bridge, yellow cabs | Key art: a marquee at dusk with the player's name in bulbs, palm silhouettes, the CLOUTWOOD sign on the hill, the Halo Dome glowing in the distance |
| Taxi yellow accent (taxi-400) | **Spotlight yellow**: the same hex, renamed spotlight-400. Fame star, active nav tab, progress |

| Clout City: NYC | Clout City: Hollywood Music |
|---|---|
| Neon magenta for nightlife and LIVE | Unchanged, and the color of the stage |
| Hazard stripes for closures | **Marquee bulbs** (a dotted edge of warm lights) for announcements and "Coming soon"; hazard stripes stay only for story closures |
| Night map generated from street geometry | Hand-illustrated town map in a sunset-to-night palette (section 4) |
| Clout flame | **Fame star** |
| Tagline "TAP IN. BLOW UP" | **"PLAY LOUD. BLOW UP."** in the same tagline style |
| Logo "CLOUT CITY NYC" | "CLOUT CITY" wordmark (unchanged asset) with a "HOLLYWOOD MUSIC" badge in place of "NYC" |

**Unchanged:** red main buttons, gold for real money only (logo, tagline, real-cash card border, ✨ REAL CASH tag), cream light sheets, dark glass chrome, C$ for virtual cash, the 3D chibi avatar on a night stage, Bungee, Barlow Condensed and Inter.

## 3. Color and type

All Clout City core, status, gold, glass and type tokens stay. The taxi tokens are renamed spotlight (same values), and three groups are added: lane colors, judgment colors and stage gradients.

### Renamed

| Clout City token | Hollywood token | Hex |
|---|---|---|
| taxi-400 | spotlight-400 | #FFC21A |
| taxi-500 | spotlight-500 | #F2A900 |
| taxi-tint | spotlight-tint | #FFF3CC |

### Lane colors (performance game only)

Each lane has a color and a shape, so the lanes read without color. The order deliberately differs from any well-known rhythm game's fret colors. Open Mic uses lanes 1 to 3.

| Lane | Token | Hex | Note shape |
|---|---|---|---|
| 1 | lane-cyan | #2EC4FF | Circle |
| 2 | lane-magenta | #FF2E88 | Diamond |
| 3 | lane-spotlight | #FFC21A | Square |
| 4 | lane-lime | #8BE04B | Triangle |

Notes are drawn as the shape filled with the lane color, a 2 pt text-on-dark outline and a soft glow at 35%. Hold tails use the lane color at 55%. Hype notes are a white star with a lane-colored rim and a pulsing glow.

## Judgment and meter colors

| Token | Hex | Use |
|---|---|---|
| judge-perfect | #FFF6E0 with a neon-500 glow | "PERFECT" text and hit sparks |
| judge-great | #8BE04B | "GREAT" |
| judge-good | #2EC4FF | "GOOD" |
| judge-miss | #D93A2F at 80% | "MISS" and the brief lane flash |
| crowd-losing-it | neon-500 #FF2E88 | Crowd meter 80 to 100 |
| crowd-into-it | green-500 #40B589 | Crowd meter 50 to 79 |
| crowd-restless | spotlight-400 #FFC21A | Crowd meter 25 to 49 |
| crowd-booing | red-500 #D93A2F | Crowd meter 0 to 24 |
| hype-500 | #B57CFF | Hype meter fill, Hype button, highway glow while Hype is active |

Hype gets its own violet so it never reads as a crowd state or as real money. Gold never appears anywhere in the performance game.

### New gradients

| Name | Stops | Where |
|---|---|---|
| sunset-sky | #2B1A4A → #C23B6E 55% → #FF8A3D 100%, linear 180° | Splash, guest map sky at dusk, share cards |
| stage-spot | #14111A base + radial #FFC21A at 18% from top centre + radial #FF2E88 at 22% bottom | Behind the highway on every stage |
| hype-surge | #B57CFF → #FF2E88, linear 90° | The highway edges and the Hype button while Hype is active |
| marquee-bulbs | repeating radial dots, #FFE7A8 4 pt every 12 pt on night-900 | Announcement bars, "Coming soon," the results header |

### Type additions

| Token | Family / weight | Size | Example |
|---|---|---|---|
| show-score | Barlow Condensed 700, tabular | 22 / 24 | "184,520" |
| show-multiplier | Bungee | 20 / 24 | "×4" |
| judgment | Bungee | 18 / 20, uppercase | "PERFECT" |
| callout | Bungee | 24 / 28 | "50 NOTE STREAK!" |
| results-stars | Native star glyph, spotlight-400 | 32 pt | ★★★★☆ |

Everything else uses Clout City's type scale. Fame uses hud-number in spotlight-400, exactly where clout was.

## 4. Reused components (C1 to C45)

Every Clout City component is reused with its anatomy, sizes, states and motion. This table lists only what changes; anything not listed is built exactly as specified in the Clout City guide.

| Component | Change for Hollywood Music |
|---|---|
| C1 HUD | Clout flame → fame star (outline star + number, spotlight-400). Everything else unchanged |
| C2 Invite and players-online pills | Unchanged |
| C3 Side icon column | Six icons: Tasks/Goals (checklist), **Shows (microphone)**, Places (building), **Band (drumsticks)**, Bills (receipt), Your Look (person). Shows badge: a slot just opened or an event starts soon. Band badge: low Chemistry or band pay due |
| C4 Stats panel | Unchanged; suggestions point to practice or the open mic for low Confidence, the Deals app for high fans |
| C5 Bottom nav | Unchanged (Home, Map, Phone, Shop) |
| C6 Story prompt | Copy: "Echo Flats has a mystery. Think you can crack it?" Emoji tile 🎸 |
| C8 Buttons | Unchanged. "Take the stage" and "Play a show" are primary-red |
| C10 Style chips | Become **scene chips** in the Sound step: Garage Rocker, Bedroom Pop, Trap Hopeful, Indie Sadcore, Synthwave Kid, Country Crossover, Mall Punk, Afrobeats Dreamer |
| C14 Step progress | Four segments: Look, Sound, Birth lottery, Home |
| C15 Tooltip | Tooltip 5 targets the Shows icon |
| C16 Reason banner | New variants: "🎟️ Show cancelled: venue double-booked," "📈 Tickets +50%: fans lining up for the Saints" |
| C19 to C21 Map | Replaced by the illustrated map (section 5) |
| C22 Live ticker | Adds show results: "🎸 @maya got 5 stars at The Rusty Amp" |
| C23 Item card | Instruments and Gear show the instrument on a small stage tile; meta reads "Cosmetic: doesn't change your score" on every instrument and gear card |

| Component | Change for Hollywood Music |
|---|---|
| C26 Event cards | Club event → club night; the first-task party → the open mic card ("Happening now," "Bring the crew" secondary, "Take the stage" primary-red) |
| C27 Leaderboard | Overline "ECHO FLATS LEADERBOARD"; fame in spotlight-500; each row shows fame tier as a small tag |
| C28 Profile | Status row: ⭐ fame · rank · 👥 fans · 💎 net worth. Adds fame tier title, band (name and member portraits), instrument, best show and setlist progress |
| C29 Phone | Apps: News, Messages, Bank, **Deals** (renamed Gigs), Settings. Wallpaper uses sunset-sky. City line reads "Echo Flats" |
| C30 to C34 Story cards | Unchanged; Lola's byline avatar gets sunglasses |
| C36 Gig card | Becomes the **deal card**: tier tags SESSION GIG, BRAND DEAL, BIG BREAK; gate line reads "Needs 1,000 fans (you have 640)" |
| C37 Location card | Venues add a show row (C58) above the visit actions. Instruments shop adds the Musicians Wanted row |
| C38 Interior scene | Adds the **stage template** (C59) for venues; the eight Clout City templates are reused for homes, café, diner, store and studio |
| C39 Collection | Tabs: Postcards, Hunt cards, Event cards, **Show cards** (one per venue on your first 5-star show) |
| C42 Treasure hunt | Unchanged; tracks named by scene |
| C43 Your Look | Adds an **Instrument** tab; the avatar holds the selected instrument |
| C44 Bank | Card name "Bank of Clout" unchanged; transactions name venues ("Show · The Rusty Amp") and band pay |
| C45 Bills | Adds band pay rows, one per bandmate |

# 5. The illustrated map (replaces C19 to C21)

The map follows Lagos Life rather than Clout City's real-street map: one contained, hand-illustrated board of a fictional town, where every building is a recognizable drawing and the whole neighborhood fits on about a screen and a half.

## C46. Illustrated base map

- **Art:** a single illustration of Echo Flats and its surroundings in a three-quarter top-down view (about 30° tilt), drawn at 3× for a 390 pt viewport. Buildings are chunky, slightly exaggerated sprites with readable silhouettes (a café with a striped awning, a dive bar with a guitar sign, a theater with a bulb marquee); roads, palms, a low hill with the CLOUTWOOD letters, and a strip of the locked districts on every edge.
- **Two versions:** day (warm, sunlit) and night (navy shadows, lit windows, glowing signs and neon). The 2 s crossfade from Clout City runs as the city clock passes dusk and dawn.
- **Camera:** pan within fixed bounds (the board never scrolls into emptiness), two zoom levels (overview and street). Default view centres on the player's home with the Halo Dome visible on the far edge.
- **Performance:** the map ships as image tiles per zoom level; only pins, vehicles, labels and overlays draw live. No street data, no map library.
- **Palette guidance for the artist:** night-800 to night-700 for shadowed ground, sunset-sky for the dusk sky band, spotlight-400 and neon-500 for signs, no gold anywhere, no real signage, logos or real buildings.

## C47. Building labels and pins

- Each place is its building sprite plus a **name plate**: a glass-dark pill (24 pt) under the building with a 16 pt emoji tile and the name in Inter 600 12 pt. Tapping the building or the plate opens the location card (C37).
- **Venues** get a marquee plate instead: night-900 with a 1 pt row of marquee bulbs on top, the venue name in Barlow Condensed 700 13 pt uppercase, and a status line: "🎤 Slot open" (neon-600 dot), "Doors in 25 min," "Played today ✓" or 🔒 with the fame tier needed.
- Story places show a small neon-600 dot during an active beat; closed places dim to 50% with a 🚨 tile; hunt steps show a 🔍 marker. Decorative vehicles loop the roads beneath the plates (Clout City rules).
- The player's marker is their avatar head in a spotlight-400 ring on their current building; the locate button recentres on it.

## C48. Locked district

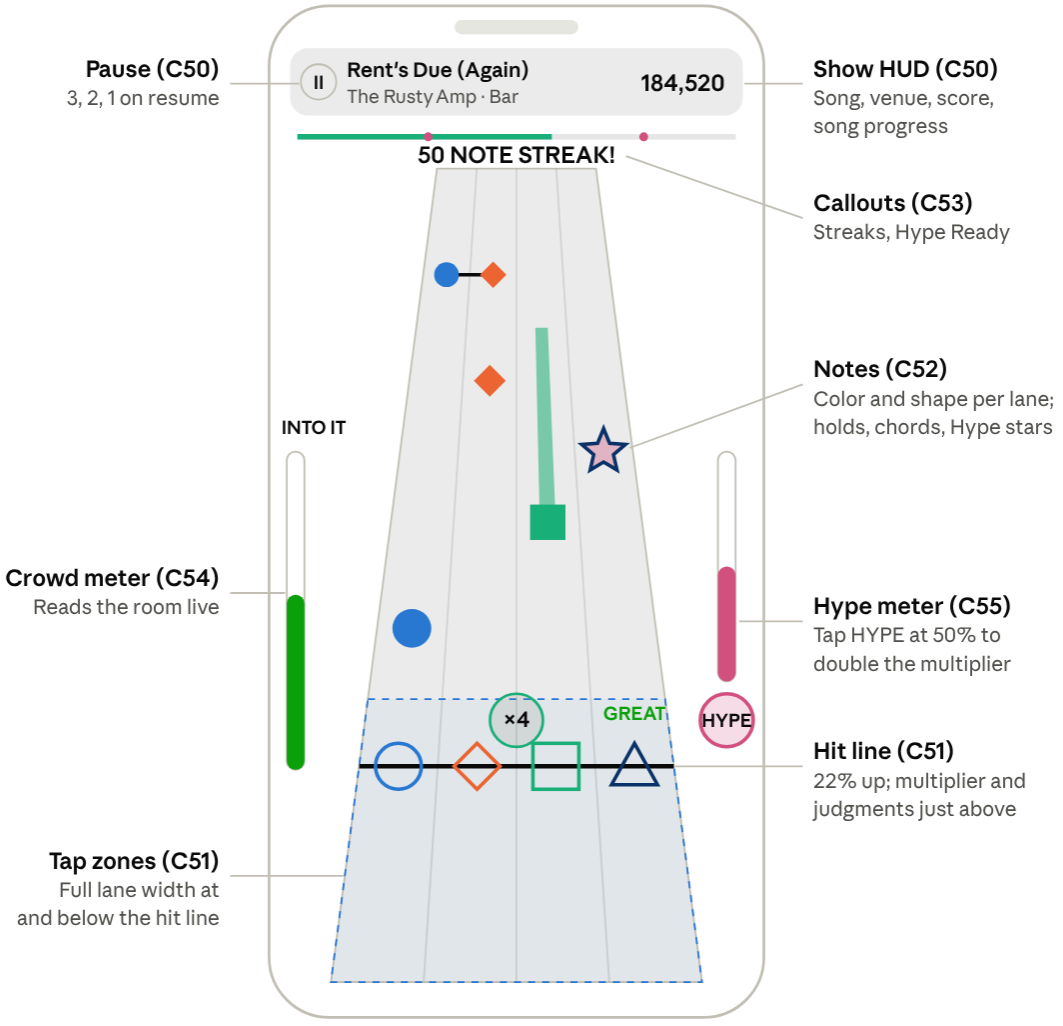

- Locked districts sit under soft, slowly drifting illustrated clouds (night-700 at 85%), with the district's tallest landmark poking through.
- A centred pill: 🔒 + district name + "Coming soon" in meta, with a marquee-bulbs edge. Tapping opens a sheet with the district's illustration and a one-line Lola teaser. Reduced motion stops the drift.

## C49. The Halo Dome and the fame ladder card

- The stadium sits on the far edge of the map, always lit, with slow sweeping searchlights at night (off under reduced motion). Its plate reads "Stadium Status 🔒."
- Tapping it opens the **fame ladder card**: a bottom sheet with the six tiers as a vertical ladder (Nobody at the bottom, Stadium Status at the top), each with its venue name, capacity and fame needed; the player's avatar head sits on their current rung with a spotlight-400 progress bar to the next. Unlocked rungs are full color, P1-locked rungs show "Coming later."

# 6. The show screen at a glance

**The highway owns the show screen; HUD and meters stay at its edges**

show screen · portrait, Bar difficulty, 4 lanes

Everything a player needs mid-song sits at the highway's edges: score and progress on top, the Crowd meter on the left, Hype on the right, and the multiplier just above the hit line. Section 7 specifies each part.

# 7. Performance components (C50 to C57)

The show screen is full-screen and portrait. The main game HUD, side column, nav and ticker are hidden for the whole song; the only chrome is the show HUD, the two meters and a pause button.

## C50. Show HUD

- A 44 pt strip at the top inside the safe area, on glass-dark at 50%: song title (Inter 600 13 pt, text-on-dark) and venue (meta) on the left; score in show-score, tabular, on the right.
- Under it, a 3 pt song progress line across the full width (text-on-dark at 20% track, spotlight-400 fill), with small ticks marking Hype phrases and crowd calls.
- The multiplier sits just above the hit line, centred: a night-900 circle 40 pt with show-multiplier text in spotlight-400 (×1 is shown dim at 40%). It pops (scale 1 → 1.25 → 1) each time it rises; at ×8 during Hype it turns hype-500.
- Pause: a 36 pt icon-round (glass-dark) top-left. It opens a small sheet: Resume, Restart (practice only), Quit ("The crowd will remember"). Resuming runs 3, 2, 1.

## C51. Note highway and lanes

- The highway fills the space between the meters: about 300 pt wide at the hit line, narrowing to about 60% at the top for depth, on the stage-spot backdrop. Lane dividers are 1 pt text-on-dark at 18%; beat lines cross the highway every beat at 8% (every bar at 16%).
- The **hit line** sits 22% up from the bottom: one 3 pt text-on-dark line at 70% with a target per lane, an outlined copy of that lane's note shape (2 pt, lane color).
- **Tap zones** are the full lane width from the bottom edge to 40 pt above the hit line. They are invisible except for feedback: a pressed lane brightens its target and shows a 40% lane-color column for as long as the thumb is down.
- Lane counts: 3 at Open Mic (lanes 1 to 3, each wider), 4 everywhere else. Minimum lane width at the hit line: 64 pt.
- Behind the highway, the stage (C59) shows the player's avatar, bandmates and the crowd, kept to 35% brightness under the highway so notes always win.

## C52. Notes

| Note | Look | Size at the hit line |
|---|---|---|
| Tap | Lane shape filled with lane color, 2 pt cream outline, 35% glow | 48 pt |
| Hold | Tap note head plus a tail of lane color at 55%, 18 pt wide; the tail brightens while held and sparks at the end | 48 pt head |
| Chord | Two tap notes joined by a 2 pt cream bar | 48 pt each |

| Note | Look | Size at the hit line |
|---|---|---|
| Power strum | Tap note with an upward chevron inside and a short vertical streak above it | 48 pt |
| Hype note | White star with a lane-color rim and a pulsing hype-500 glow; the phrase is bracketed by a faint violet band on the highway | 52 pt |

Notes scale with perspective as they travel (about 55% size at the top). "Big notes" in Settings adds 15%.

## C53. Judgments, sparks and callouts

- **Judgment text** (judgment style) pops 40 pt above the hit line in that lane: PERFECT, GREAT, GOOD or MISS in their judgment colors, rising 12 pt and fading over 300 ms. Only the latest judgment per lane shows.
- **Hit sparks:** a burst of 6 to 10 lane-colored particles from the target on every hit; a bigger burst and a cream ring on Perfect. A miss flashes the lane red at 25% for 120 ms and dims the note.
- **Callouts** (callout style, text-on-dark with a neon-500 glow) slide in from the top of the highway and leave within 1.2 s: "HOT START!", "50 NOTE STREAK!", "HYPE READY!", "CROWD'S ON ITS FEET!". Never more than one at a time, and never over the bottom third of the highway.

## C54. Crowd meter

- A vertical capsule on the left edge, 14 × 220 pt, glass-dark track, centred on the highway's lower half. Fill rises from the bottom in the crowd color for its range (booing red, restless yellow, into-it green, losing-it neon), with a cream needle line at the current value.
- Above it, a live **crowd label** pill (glass-dark, label-tag): LOSING IT, INTO IT, RESTLESS or BOOING, with an emoji (🔥, 🙌, 😐, 👎). The label crossfades when the range changes.
- In Booing, the capsule pulses red every 0.8 s and the screen edges get a faint red vignette. Under reduced motion, the pulse becomes a steady red outline.

## C55. Hype meter and Hype button

- A matching vertical capsule on the right edge, filling in hype-500, with a tick at 50%.
- Below it, the **Hype button**: a 56 pt circle, dim (night-900, hype-500 outline at 40%) until the meter reaches 50%, then full hype-surge fill with a breathing glow and the label "HYPE" in Bungee 12 pt. It sits within thumb reach above the right lane's tap zone,

never inside it.

- While Hype is active: the highway edges glow with hype-surge, the lanes' beat lines turn violet, the crowd raises lighters on the stage, the multiplier turns hype-500, and the meter drains visibly.

## C56. Crowd call strip

- During a crowd call the highway dims to 30% and a **call strip** slides down from the top: a glass-dark band 88 pt tall, full width minus 24 pt, radius-lg.
- Inside: a horizontal timeline with beat ticks, the phrase's notes as small lane shapes (28 pt) in their lane colors, and a cream cursor sweeping left to right. Overline "THEY CALL" during the call; "YOU ANSWER" during the response.
- During the response, the player taps the lanes on the highway's tap zones as usual; each echoed note lights its icon on the strip with its judgment color. An echo label (Nailed it, Close, Off) shows at the strip's right end. A clean echo plays "THEY SANG IT BACK!" as a callout.

## C57. Results card

- A full-screen sheet over the dimmed stage, rising after the last note: a marquee-bulbs header with the venue name, then the star rating (results-stars, popping in one by one), the score in display-xl, and a 2 × 2 grid of stats (accuracy, best streak, crowd peak, notes hit) in show-score with overline labels.
- Badges row when earned: FULL COMBO (neon-600 label), NEW BEST (spotlight-tint info badge), first 5-star show card.
- Rewards row: 👥 +fans, ⭐ +fame (spotlight-400), +C$ (green-text), each counting up over 600 ms. If fame was already earned at this venue today, the fame chip reads "Fame again tomorrow."
- Lola's one-line review in body italics ("Four stars. The bartender stopped pouring to listen. Briefly.").
- Buttons: primary-red "Continue," primary-night "↗ Share" (C65), and in practice a secondary "Play again."
- **Booed-off variant:** the header turns red-500 with "BOOED OFF," no stars, the partial pay, Lola's roast, and a primary-red "Try again" when today's retry is available.

# 8. Venue, setlist, band and setup components (C58 to C65)

## C58. Show row (on a venue's location card)

- Sits above the visit actions on every venue's card (C37): overline "TONIGHT'S SLOT," the difficulty as a tag (OPEN MIC, BAR, CLUB, THEATER), capacity in meta ("120 cap"), and the reward preview as meta chips (C$ fee range, ⚡ Energy, 👥 fans, ⭐ fame).
- Button: primary-red "Play a show" once the player is at the venue; before arriving, the card's main button is "Go there" as usual.
- Disabled states keep the button visible with a reason in meta: "Doors in 25 min," "Played today: back tomorrow," "Needs Buzzing (1,840 / 2,500 fame)," "Need 2 bandmates," "Not enough Energy," or a story reason banner (C16) such as "🎟 Show cancelled: venue double-booked."
- After a booed-off show: "The sound guy owes you one" with a primary-red "Try again" (once a day).

## C59. Stage scene (new interior template)

- A 2.5D illustrated stage per venue on a shared template: back wall with the venue's sign, stage lights, a riser, and a crowd zone in front. Recolored and re-propped per venue (café corner with fairy lights, dive bar with a chain-link backdrop, club with LED walls, theater with velvet curtains and a balcony).
- The player's avatar stands centre stage holding their instrument; bandmates stand at marked spots behind. Avatars on stage are **pre-rendered 2D sprites** from the 3D model (idle, playing loop, Hype pose, bow), so the stage stays fast on low-end phones.
- **Crowd density** follows turnout: 6 to 40 crowd sprites, filling from the front. Crowd animation follows the Crowd meter: bob (Into It), jump with raised hands (Losing It), arms crossed and looking at phones (Restless), thumbs down (Booing).
- Outside a show, the stage is the venue's interior: the player can walk around and "Watch a show," where an NPC act plays on stage.

## C60. Setlist picker

- A bottom sheet titled "Pick your song," with the venue and difficulty in subtext.
- One row per song: an album-tile (56 pt, original cover art), title in title style, feel and BPM in meta, the player's best stars at this difficulty (★ row, spotlight-500 on, divider off) and a NEW label on unplayed songs. Locked songs stay in the list dimmed with their unlock condition ("Unlocks at Buzzing").
- A story song (when live) sits at the top with a neon "LIMITED" tag and its window ("Playable until Saturday").

- Tapping a row selects it (selection card, single); primary-red "Take the stage" starts the soundcheck: a pill-solid "Soundcheck… 80%" over the stage while audio loads, then a 3, 2, 1 in display-xl.

## C61. Band screen

- Opened from the Band icon (C3). Header: the band name in display-lg with an edit pencil (once a week) and the number of members.
- One card per member (surface-card, radius-lg): portrait (56 pt), name and role in title, personality line in subtext, the weekly fee in meta, and a Chemistry bar (6 pt; green-500 at 60+, spotlight-400 from 20 to 59, red-500 under 20) with a status word ("Tight," "Fine," "Restless," "Halfway out the door"). Buttons: primary-red "Rehearse" and a ⋯ menu with destructive "Let go" (confirmed).
- The player's own card is first, showing their instrument; empty slots show a dashed card with "Find a bandmate" (opens the board at Riff & Ruin).
- A warning row appears when any member is below 20: "Dez is 'taking some time to find himself.' 2 days to win him back."

## C62. Musicians Wanted card

- Pinned-flyer style cards on a corkboard background (surface-raised, slight paper texture, a cartoon pushpin), one per candidate: portrait, name, role, personality line, starting Chemistry, weekly fee.
- Primary-green "Hire" opens a big-purchase confirmation: "Hire Dez for C$120 a week? Band pay is due with rent."

## C63. Rehearsal

- Opens at Echo Room Studios or the Garage Bungalow: the bandmate on a small practice-room stage, and the crowd call strip (C56) as the full play area, five phrases per session.
- A progress row of five dots, then a small results card: accuracy, Chemistry change ("Dez +6 · Tight") and Energy spent.

## C64. Calibration

- Shown once after the tutorial show and from Settings: a pulsing ring on a stage-spot background with the instruction "Tap the big button on every beat," eight beats, then "You're synced" with the measured offset in meta. A secondary "Redo" and primary-red "Done."
- A second, optional visual check: a flashing note and a click; the player nudges a slider until they line up.

### C65. Show share card

- A 9:16 image for stories and a 1:1 variant: sunset-sky background, the player's avatar on stage, the venue name on a marquee, stars, the song title, "+37 fans," the band name and the game's wordmark with "PLAY LOUD. BLOW UP." No score digits smaller than 18 pt; no real-money marks.

## 9. Motion, audio feedback and accessibility

Clout City's motion table stays. These rows are added for shows; every show animation is tied to the audio clock, never to frame timing.

| Interaction | Duration | Easing |
|---|---|---|
| Note travel | Linear, set by difficulty (2.0 s to 1.4 s top to hit line) | linear |
| Judgment pop | 300 ms rise 12 pt + fade | ease-out |
| Hit spark | 250 ms burst | ease-out |
| Multiplier rise | 180 ms scale 1 → 1.25 → 1 | back-out |
| Callout | 1.2 s: 150 ms slide in, hold, 200 ms fade | ease-out |
| Crowd label change | 250 ms crossfade | ease-in-out |
| Hype start | 400 ms highway edge glow-in, then a 1.2 s breathing loop | ease-in-out |
| Results stars | 120 ms each, 80 ms apart, scale 0.6 → 1 | back-out |
| Reward count-up | 600 ms | ease-out |
| Soundcheck to 3, 2, 1 | 3 beats at the song's BPM | linear |

**Audio feedback.** Hits produce no extra click sound (the music is the feedback); a miss briefly drops the lead stem and plays a soft muted-string sound. Crowd reactions (cheers, chatter, boos) follow the Crowd meter. Callouts have a short crowd swell. UI sounds outside shows are unchanged from Clout City.

**Accessibility.**

- Lanes differ by shape as well as color; judgments are words, not just colors.
- Reduced motion: no screen shake, no flashes, no particle bursts (a simple ring instead), no drifting clouds or searchlights.
- Settings: note speed (1× to 1.5×), big notes (+15%), high-contrast highway (solid night-900 behind the lanes, stage hidden), and haptics on or off.

- Contrast: judgment words and callouts sit on the dark highway at 7:1 or better.
- Every show can be paused; leaving the tab pauses automatically.

## 10. Starter tokens (CSS additions)

Add these to the Clout City token file; keep every existing token, and alias the taxi tokens to the new spotlight names during migration.

```
:root {
  /* renamed (same values as taxi-*) */
  --spotlight-400:#FFC21A; --spotlight-500:#F2A900; --spotlight-tint:#FFF3CC;

  /* lanes: color + shape (circle, diamond, square, triangle) */
  --lane-1:#2EC4FF; --lane-2:#FF2E88; --lane-3:#FFC21A; --lane-4:#8BE04B;

  /* judgments */
  --judge-perfect:#FFF6E0; --judge-great:#8BE04B; --judge-good:#2EC4FF; --
judge-miss:rgba(217,58,47,.8);

  /* crowd meter */
  --crowd-losing-it:#FF2E88; --crowd-into-it:#40B589; --crowd-
restless:#FFC21A; --crowd-booing:#D93A2F;

  /* hype: violet, never gold */
  --hype-500:#B57CFF;
  --g-hype:linear-gradient(90deg,#B57CFF,#FF2E88);

  /* Hollywood gradients */
  --g-sunset:linear-gradient(180deg,#2B1A4A 0%,#C23B6E 55%,#FF8A3D 100%);
  --g-stage:radial-gradient(60% 40% at 50%
0%,rgba(255,194,26,.18),transparent),
            radial-gradient(70% 50% at 50%
100%,rgba(255,46,136,.22),transparent),#14111A;
  --marquee-bulb:#FFE7A8;

  /* show layout */
  --hit-line:22%;           /* from the bottom edge */
  --lane-min:64px;          /* at the hit line */
  --note-size:48px;
}
```

# 11. Build checklist

- [ ] Copy the Clout City Design System Guide (v2) into docs and ship its token file plus section 10's additions.
- [ ] Approve one static frame of the illustrated Echo Flats map (day and night) before building plates and gestures.
- [ ] Build the show screen (C50 to C57) against one placeholder song first; test timing on a low-end Android phone before any art.
- [ ] Lock the highway's look with one approved screenshot at each of the four difficulties.
- [ ] Build calibration (C64) before tuning timing windows.
- [ ] Build venue, setlist, band and share components (C58 to C65).
- [ ] Apply the C1 to C45 changes in section 4.
- [ ] Audit: no gold in the performance game; lanes readable in grayscale; nothing overlaps the highway during a show.
- [ ] Check every screen at 390 pt and keep shows at 50 fps or better on a low-end Android device.
